

LEVEL ONE - DURING VISIT

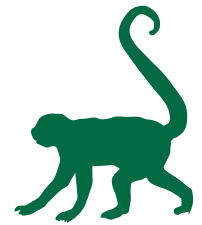

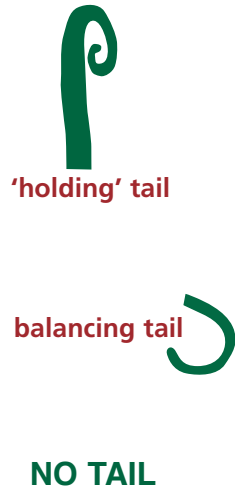

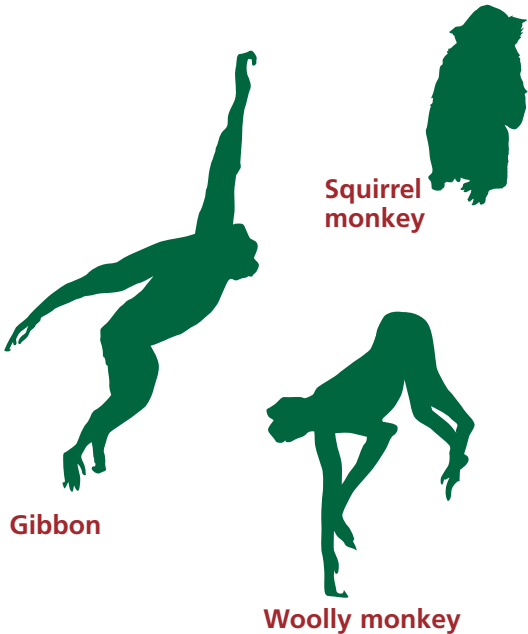

Bodies and Movement

FUN FACTS

Woolly monkeys use their tail like a third arm! They hold on to supports such as branches so that their hands and feet are free for collecting food and doing other things. They can even pick up things with their tails!

Activity:

Draw a line to match the tails below with their owners.

In the boxes here, draw the tails of each of the animals. Is the tail used for balancing or holding things? Put circles round your answers.

Tail of a ring-tailed lemur

What is this tail used for?
Balancing/Holding

Tail of a capuchin monkey

What is this tail used for?
Balancing/Holding

Tail of a woolly monkey

What is this tail used for?
Balancing/Holding

Tail of a common marmoset

What is this tail used for?
Balancing/Holding

Tail of a squirrel monkey

What is this tail used for?
Balancing/Holding
